Our hosting service is now run on **100% Green Energy**.

Deal Online is proud to announce that 100% of the energy consumed via our hosting service is now purchased from green energy sources.

In fact the amount of **green energy purchased covers 130% of the energy consumed** by our hosting services; this puts our mind at ease when considering business growth throughout the year.

Reducing our environmental impact is important to *Deal Online*. We've committed to reducing our carbon emissions - our hosting servers were recently updated with 36% more energy efficient replacements and we've also begun replacing our office systems.

To learn about how your business could also go green, feel free to talk with our green energy providers [3Degrees](#).
